

# Usability: Evaluating Websites Assignment Sheet

*For this project you are going to find and evaluate five websites.*

## **Step 1: Pick a Website to Evaluate**

You're going to have to analyze many pages in the site you choose, so don't pick something too big. Try using a search engine to find sites that are interesting to you. Or try looking for sites that have a similar purpose or target audience to the site you'd like to create.

## **Step 2: Analyze it**

Use the rubric that your teacher provides to analyze the site. You are going to grade the site based on how well it follows the rubric. This is the same rubric that your own grade is going to come from. The more you use this rubric the better you'll understand how it works.

## **Step 3: Repeat Until You've Done Five**

Please repeat the first two steps until you've graded 5 websites. This process should help you learn to view a website critically. Web designers have to be picky, and should work hard to make sure that the web is easy to use and well designed.
